Over 10 million pages on Type II Diabetes

- Posted by [Pankaj Oudhia](#) on November 24, 2008 at 13:49
- [View Blog](#)

Here is present status of scientific report on Type II Diabetes, I am preparing from last 14 years. This report is near completion now. At present the size of report is over 200 GB. In terms of pages, over 10 million pages (A4 size). The report is written in code words in order to avoid its misuse. This report is a result of interactions with over 6000 Traditional Healers, herb collectors, farmers, herb vendors, traders etc. of Indian state Chhattisgarh. Over 80,000 high resolution pictures (over 210 GB; other than 200 GB text) are important part of this report. Over 650,000 pages and 30,000 pictures are online at Ecoport.org, so far.

Most of the traditional knowledge documented in this report is coming for the first time among world community. This knowledge is not present in

ancient Indian literatures as well as in world literatures. Many Healers interacted during surveys are not with us. Their knowledge is safe in this report. Complex herbal formulations having hundreds of herbs are mentioned in details. This report gives details of over 2000 methods through which herbal combinations are given. Each method is described in over 5000 pages. Traditional Allopathic Knowledge through which herbs are enriched with medicinal properties before harvesting is described in much detail.

In order to make this report more useful I am trying to add video clips with this report. Over 100 video clips (duration : 1 minute to 30 minutes) have been prepared so far. For example, Harra (*Terminalia chebula*) fruits are collected for use in Diabetes. I got opportunity to shoot pictures of herb collectors collecting fallen fruits in dense forest. I am uploading this video clip in our research and media group.

According to plan, I have written 75 percent of this report but in fact based on knowledge present in the state, I feel that I have to write throughout life. I am planning to write reports on heart diseases and cancer in coming years. The reports on Medicinal Rice and Agrohomoecopathy are also near completion.

From collection of information to typing of report, it is effort of one person as I am working without any financial as well as technical help from anyone. You can imagine the effort and cost involved in it so far.

Some links for on-line part of this report in Ecoport.
